LAB REPORT
on

Object Oriented Java Programming

(23CS3PCOOJ)

Submitted by

Chiraiya Sethiya (1BM23CS080)

in partial fulfillment for the award of the degree of
BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
Sep-2024 to Jan-2025

B.M.S. College of Engineering

Bull Temple Road, Bangalore 560019

(Affiliated To Visvesvaraya Technological University, Belgaum)

Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the Lab work entitled "Object Oriented Java Programming (23CS3PCOOJ)" carried out by **Chiraiya Sethiya (1BM23CS080),** who is bonafide student of **B.M.S. College of Engineering.** It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum. The Lab report has been approved as it satisfies the academic requirements in respect of an Object Oriented Java Programming (23CS3PCOOJ) work prescribed for the said degree.

Lab faculty Incharge Name Assistant Professor Department of CSE, BMSCE	Dr. Jyothi S Nayak Professor & HOD Department of CSE, BMSCE

Program 1
Quadratic Equation

Algorithm:

Code:
```java
import java.util.Scanner;

class Coeff {
    double a;
    double b;
    double c;
}
```

```java
public class QuadraticEquation {
    public static void main(String[] args) {

        Scanner scanner = new Scanner(System.in);
        Coeff coeff = new Coeff();

        System.out.println("Enter the coefficients of a, b, c:");

        System.out.print("Enter coefficient a: ");
        coeff.a = scanner.nextDouble();
        while (coeff.a == 0) {
            System.out.println("Not a quadratic equation. Please enter a non-zero value for a:");
            coeff.a = scanner.nextDouble();
        }

        System.out.print("Enter coefficient b: ");
        coeff.b = scanner.nextDouble();
        System.out.print("Enter coefficient c: ");
        coeff.c = scanner.nextDouble();

        double d = coeff.b * coeff.b - 4 * coeff.a * coeff.c;

        if (d == 0) {
            double r1 = -coeff.b / (2 * coeff.a);
            System.out.println("Roots are real and equal.");
            System.out.println("Root 1 and Root 2: " + r1);
        } else if (d > 0) {
            double r1 = (-coeff.b + Math.sqrt(d)) / (2 * coeff.a);
            double r2 = (-coeff.b - Math.sqrt(d)) / (2 * coeff.a);
            System.out.println("Roots are real and unique.");
            System.out.println("Root 1: " + r1);
            System.out.println("Root 2: " + r2);
        } else {
            double realPart = -coeff.b / (2 * coeff.a);
            double imaginaryPart = Math.sqrt(-d) / (2 * coeff.a);
            System.out.println("Roots are imaginary.");
            System.out.println("Root 1: " + realPart + " + " + imaginaryPart + "i");
            System.out.println("Root 2: " + realPart + " - " + imaginaryPart + "i");
```
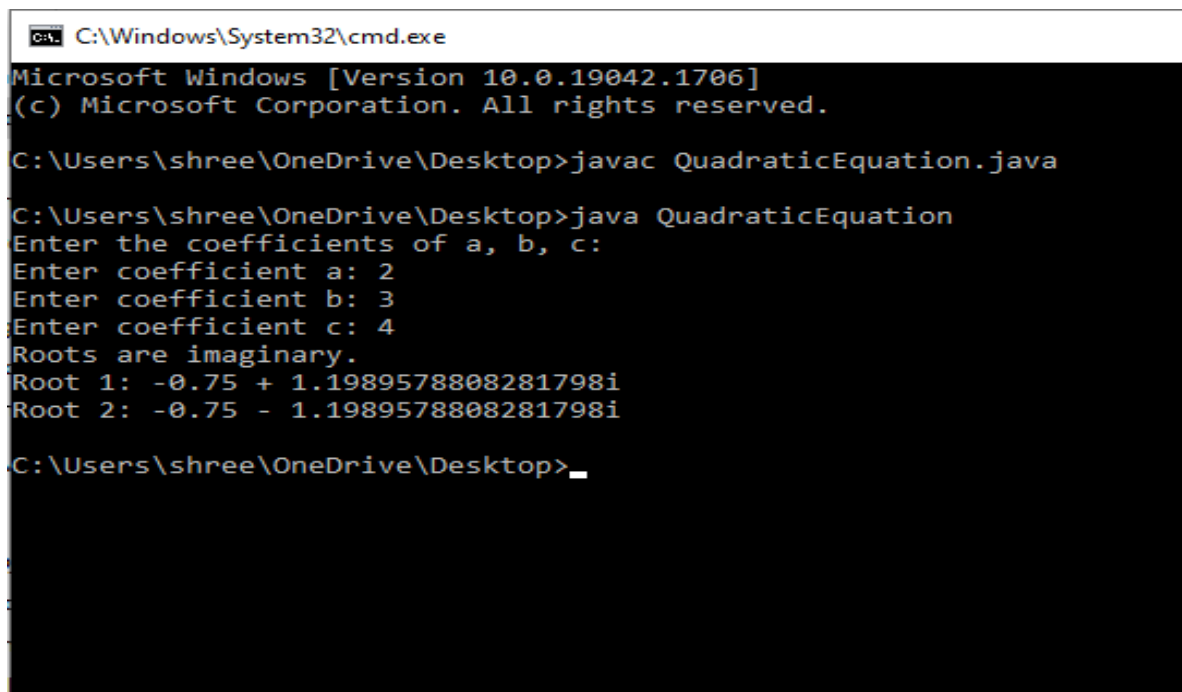

```
        }

    scanner.close();
  }
}
```

Output:

Program 5
Bank
Algorithm:

Develop a Java program to create a class Bank which maintains two kinds of account for its customers, one called savings account, and the other current account. The saving account provides compound interest and withdrawal facilities, but no cheque book facility. The current account provides cheque book facility but no interest. Current account holder should also maintain a minimum balance. If the balance falls below this and, a service charge is imposed.

Create a class Account.

(a) Accept deposit from customer & update the balance

(b) Display the balance

(c) compute & deposit interest

(d) Permit withdrawal & update the balance

```java
import java.util.Scanner;
class Account
{
    protected String name;
    protected String accno;
    protected double balance;
    public Account (String name, String accno,
                    double balance)
    {
        this.name = name;
        this.accno = accno;
        this.balance = balance;
    }

    public void deposit (double amount)
    {
        if (amount > 0)
        {
            balance += amount;
            System.out.println ("Deposit balance
                     New balance :" + balance);
        }
        else
        {
            System.out.println (" Amount is not
                               positive");
        }
    }

    public void display Balance ()
    {
        System.out.println (" Balance : " + balance);
    }

    public void withdraw (double amount)
    {
        if (amount > 0 && amount >= balance )
        {
            System.out.println (" withdraw successful
                     New balance :" + balance);
        }
        else
        {
            System.out.println (" Invalid Balance");
        }
    }
}

class SavAcc extends Account{
    double interest;
    public SavAcc (String name, String accno,
                   double balance, double interest
```

```java
{
    super (name, accno, balance);
    this.interest = interest;
}

public void compoundDeposit (int year)
{
    double interest = balance * Math.pow (1+ int/1000,
                            balance);
    balance += interest;
    System.out.println (" Interest deposited
                   New Balance :" + balance);
}

public void withdraw (double amount)
{
    super.withdraw (amount);
}
}

class curAcc extends Account {
    double minBalance;
    double Service charge;
    public curAcc (String name, String accno, double
        balance, double minBalance, double Service
        charge)
    {
        super (name, accno, balance);
        this.minBalance = minBalance;
        this.Service charge = Service charge;
    }
    public void withdraw (double amount)
    {
```

```java
    if (balance - amount < minBalance)
    {
        System.out.println (" Balance below
            minBalance, charge service charge" +
                    service charge);
        balance -= (amount + Service charge);
    }
    else
    {
        balance -= amount;
        System.out.println (" withdraw successful
            new balance :" + balance);
    }
}

public class Bank
{
    public static void main (String [] args)
    {
        Scanner sc = new Scanner (System.in);
        System.out.println (" Enter the account
            type 1) savings 2) current");
        int acc type = sc.nextInt();
        sc.nextLine();
        System.out.println (" Enter name :");
        name = sc.nextLine();
        System.out.println ("Enter accno:");
        accno = sc.nextLine();
        System.out.println ("Enter the Balance:");
        balance = sc.nextDouble();
        Account accounts;
        if (acc type == 1)
        {
            System.out.println (" Enter deposit rate:");
            interest = sc.nextDouble();
```

**Code:**
```java
import java.util.Scanner;

abstract class Account {
    String customerName;
    String accountType;
    String accountNumber;
    double balance;

    public Account(String customerName, String accountType, String accountNumber) {
        this.customerName = customerName;
        this.accountType = accountType;
```

```java
      this.accountNumber = accountNumber;
      this.balance = 0.0;
   }

   public void deposit(double amount) {
      balance += amount;
      System.out.println("Deposited amount is: " + amount);
      displayBalance();
   }

   public void displayBalance() {
      System.out.println("Current balance is: " + balance);
   }

   public abstract void withdraw(double amount);
}

class SavAcct extends Account {
   double interestRate;

   public SavAcct(String customerName, String accountNumber, double interestRate) {
      super(customerName, "savings", accountNumber);
      this.interestRate = interestRate;
   }

   public void compoundDeposit() {
      double interest = balance * (interestRate / 100);
      deposit(interest);
      System.out.println("Interest of " + interest + " deposited");
   }

   public void withdraw(double amount) {
      if (amount <= balance) {
         balance -= amount;
         System.out.println("Withdrawn amount is: " + amount);
      } else {
         System.out.println("Insufficient amount for withdrawal.");
         return;
      }
      displayBalance();
   }
}
```

```java

Program 6

Packages

Algorithm:

Create a package CIE which has two classes - Student & Internals. The class Personal has members like USN, name, sem. The class Internals has an array that stores the internal marks scored in five courses of the current semester of the student. Create another package SEE which has the class External which is a derived class of Student. This class has an array that stores the SEE marks scored in five courses of the current semester of the student.

```java
package CIE;

import java.util.Scanner;

public class Student {
    protected String usn;
    protected String name;
    protected int sem;

    public void inputStudentDetails() {
        Scanner s = new Scanner(System.in);
        System.out.print("Enter USN: ");
        this.usn = s.nextLine();
        System.out.print("Enter Name: ");
        this.name = s.nextLine();
        System.out.print("Enter Semester: ");
        this.sem = s.nextInt();
    }
